Recipe Book — Screenshots

Course-end Project 2 · Developing a Recipe App Using Gen AI-Assisted Code Generation · 31 October 2026

Rubric criterion	Figures
UI generation	1, 2
Sample data / recipe display	1, 2
Search functionality	3, 4, 5, 6
Recipe detail component	7, 13
Adding more recipes	8, 9, 10, 11, 12
Responsive layout	14, 15
End-to-end testing	16

Recipe list (UI, sample data, recipe display)

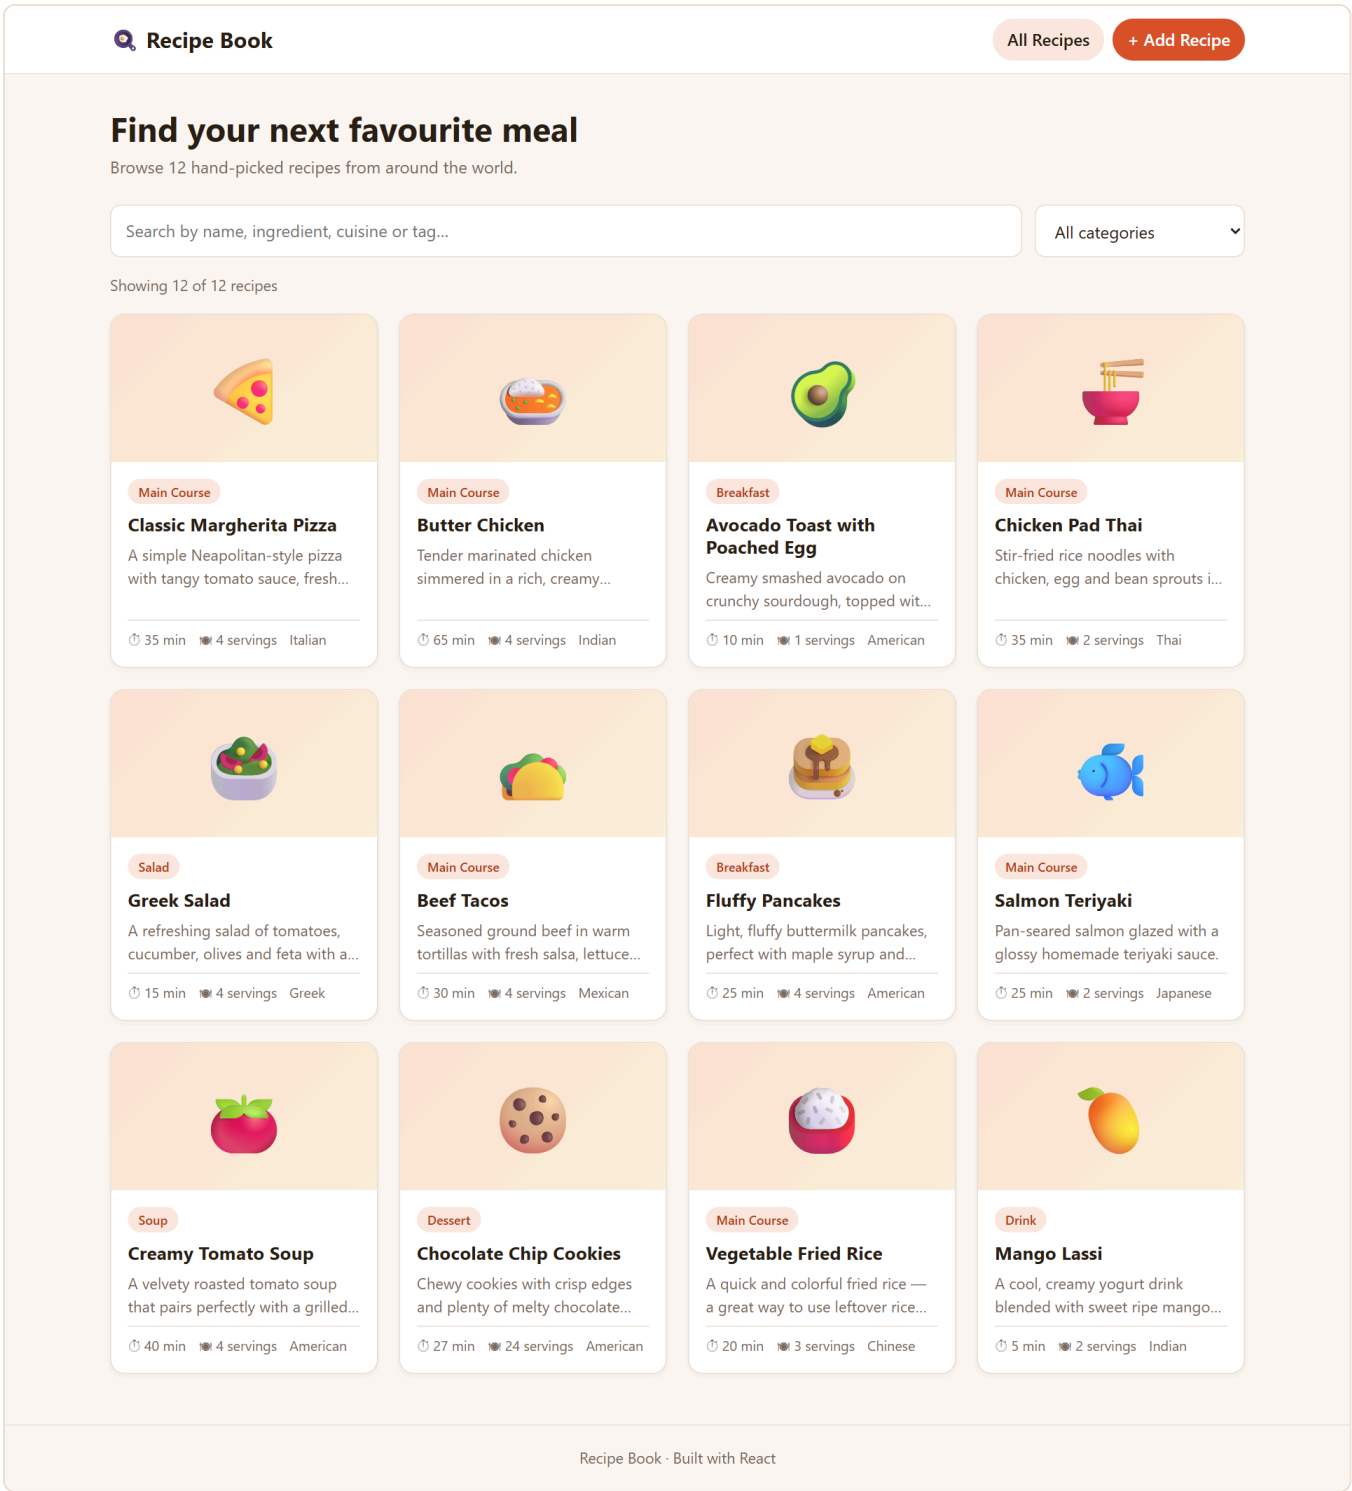

Figure 1 — Recipe list page. All 12 sample recipes are shown as cards in a responsive grid, with a header, the search bar and a result count.

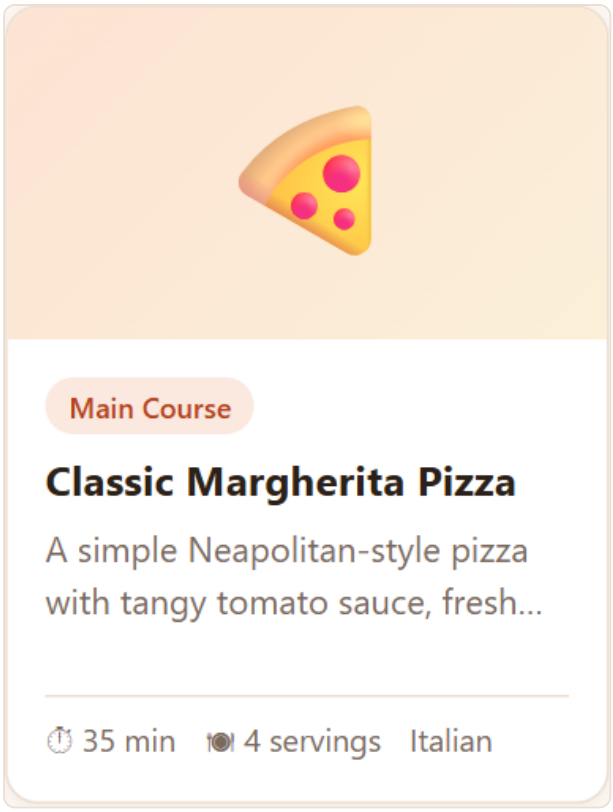

Figure 2 — Recipe card. Each card shows the category badge, title, a short description, total time (prep + cook), servings and cuisine. Clicking it opens the detail page.

Search functionality

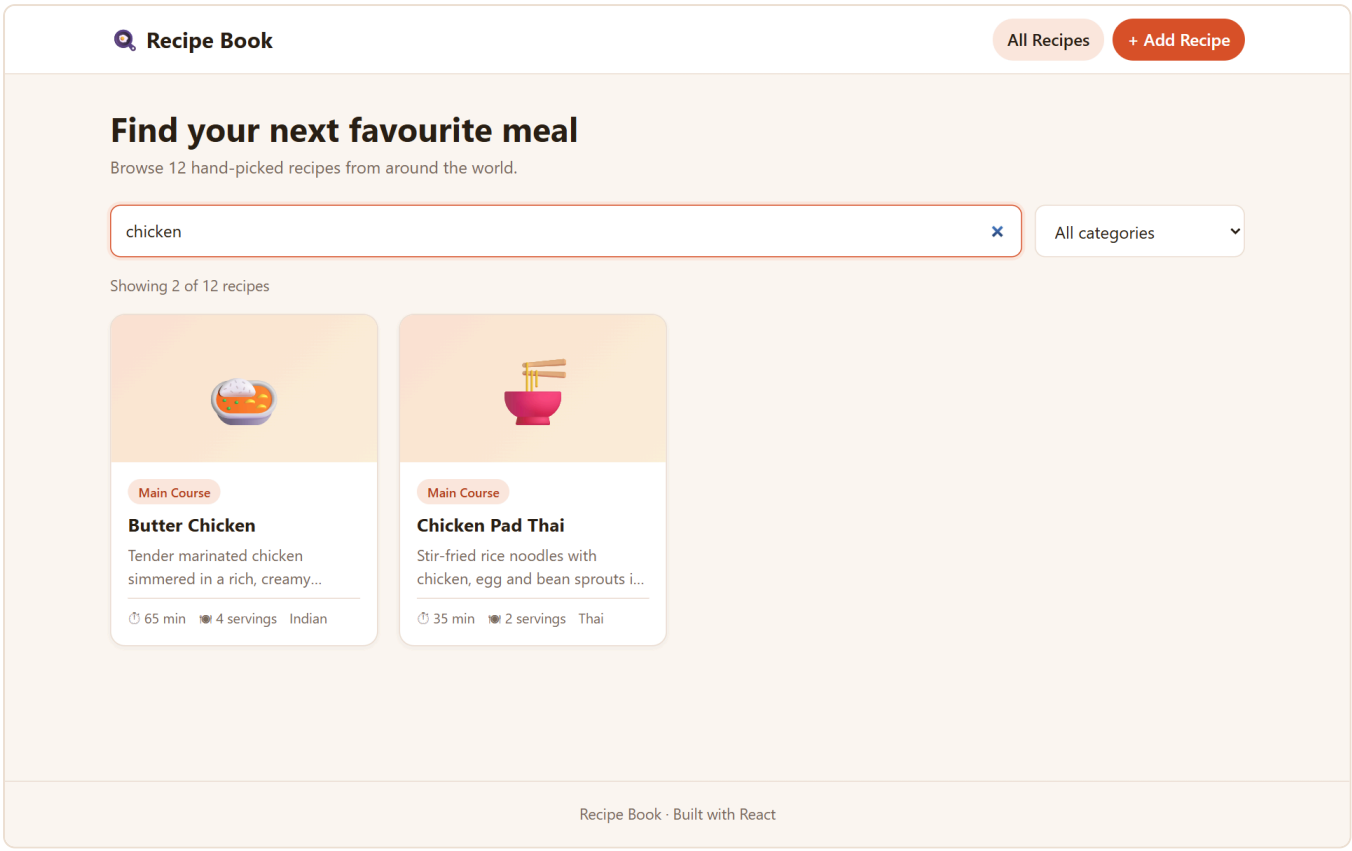

Figure 3 — Search by keyword. Searching "chicken" returns the 2 matching recipes. The search covers titles, descriptions, cuisines, categories, tags and ingredients.

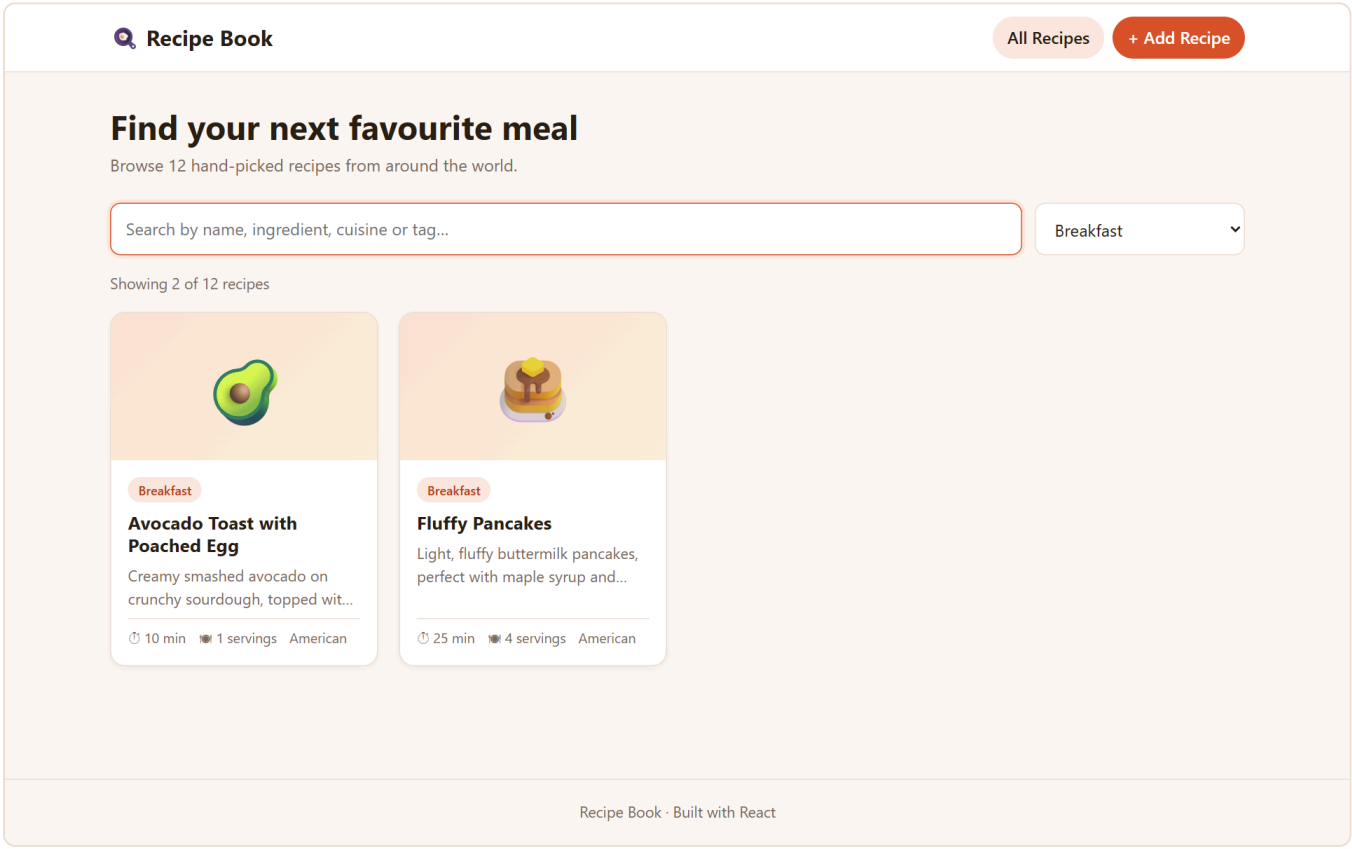

Figure 4 — Category filter. Selecting "Breakfast" shows only breakfast recipes.

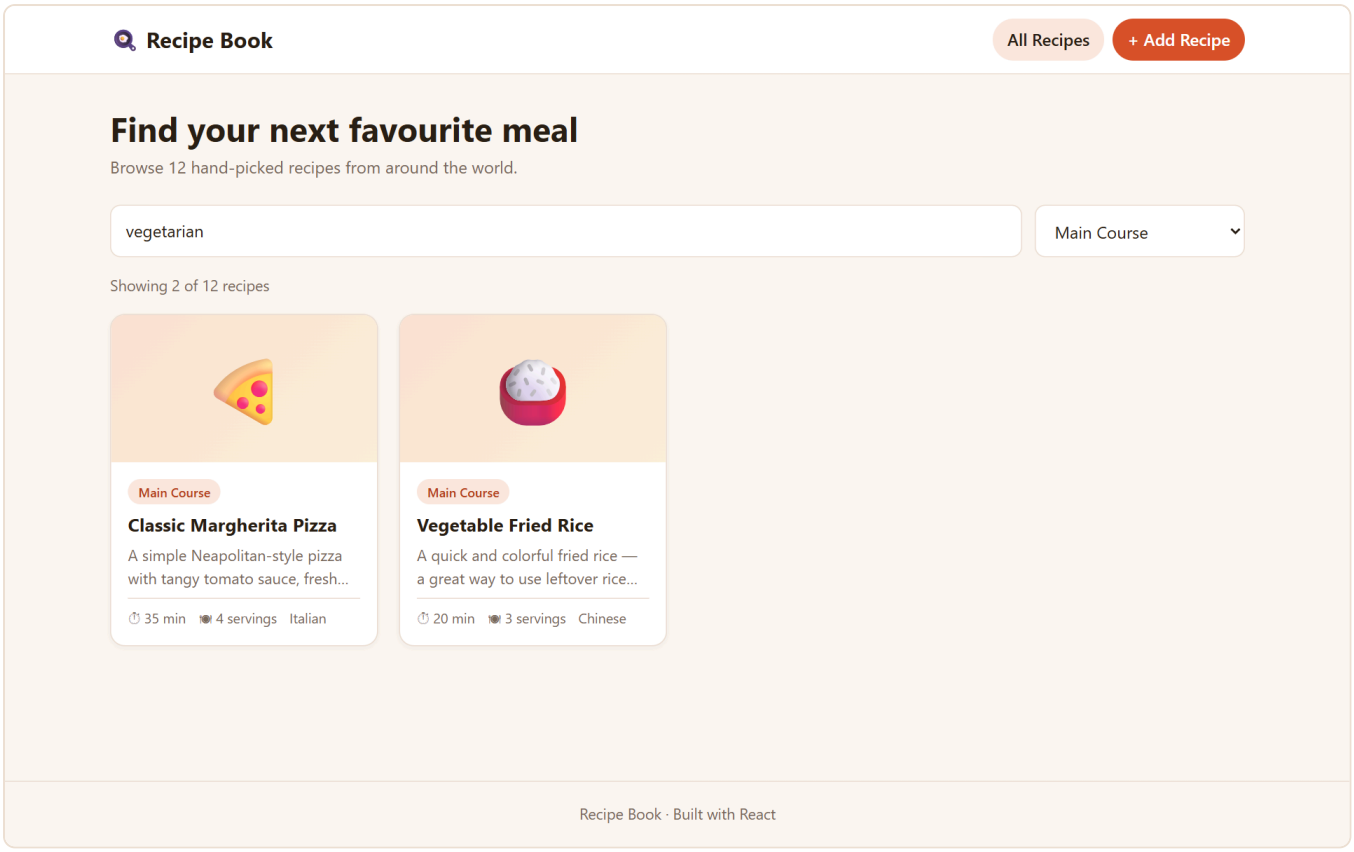

Figure 5 — Search plus filter. "vegetarian" combined with the "Main Course" category returns 2 recipes. The search is stored in the URL, so it can be shared and survives going back.

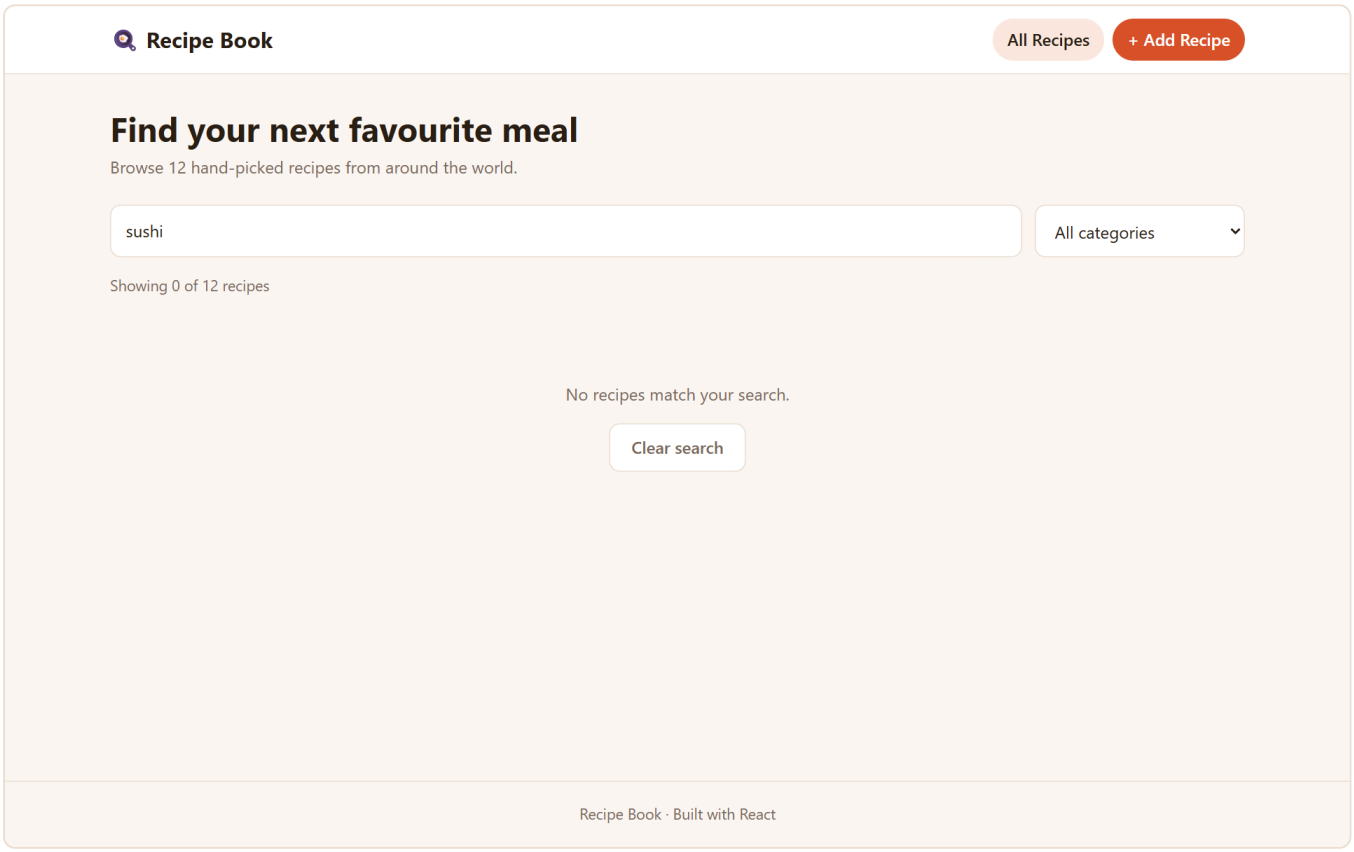

Figure 6 — No results. A search with no matches shows a friendly message and a "Clear search" button.

Recipe detail component

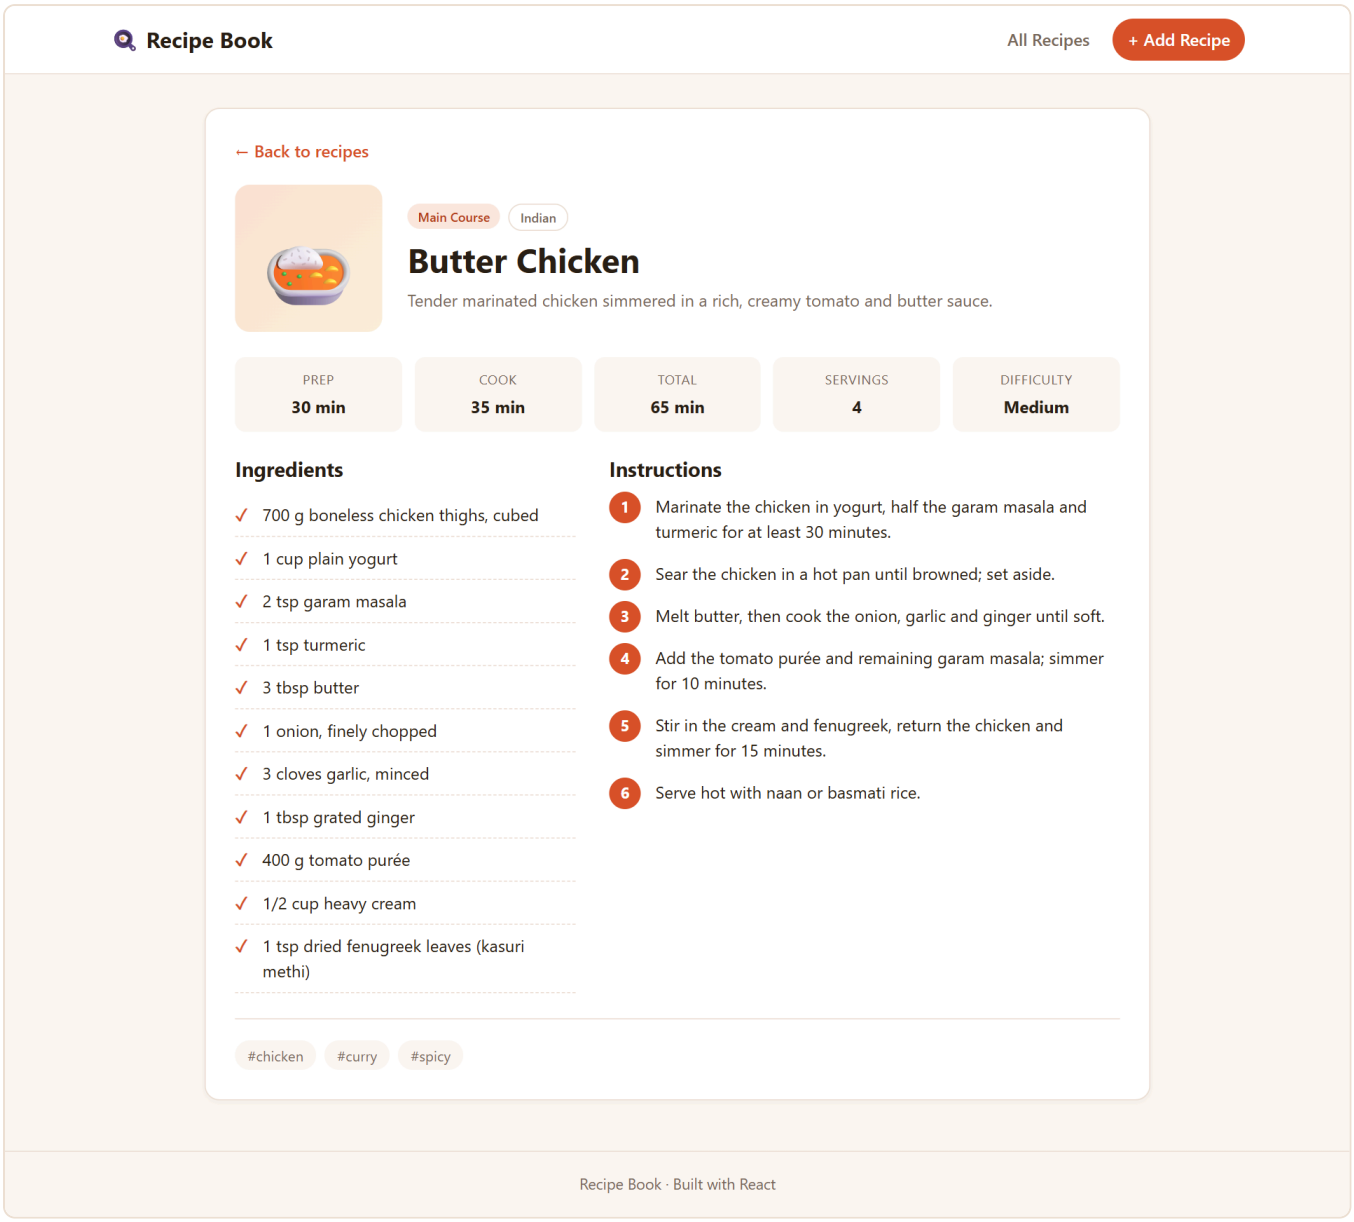

Figure 7 — Recipe detail card. Category and cuisine badges, description, prep/cook/total time, servings, difficulty, the ingredient checklist, numbered instructions and clickable tags.

Adding more recipes

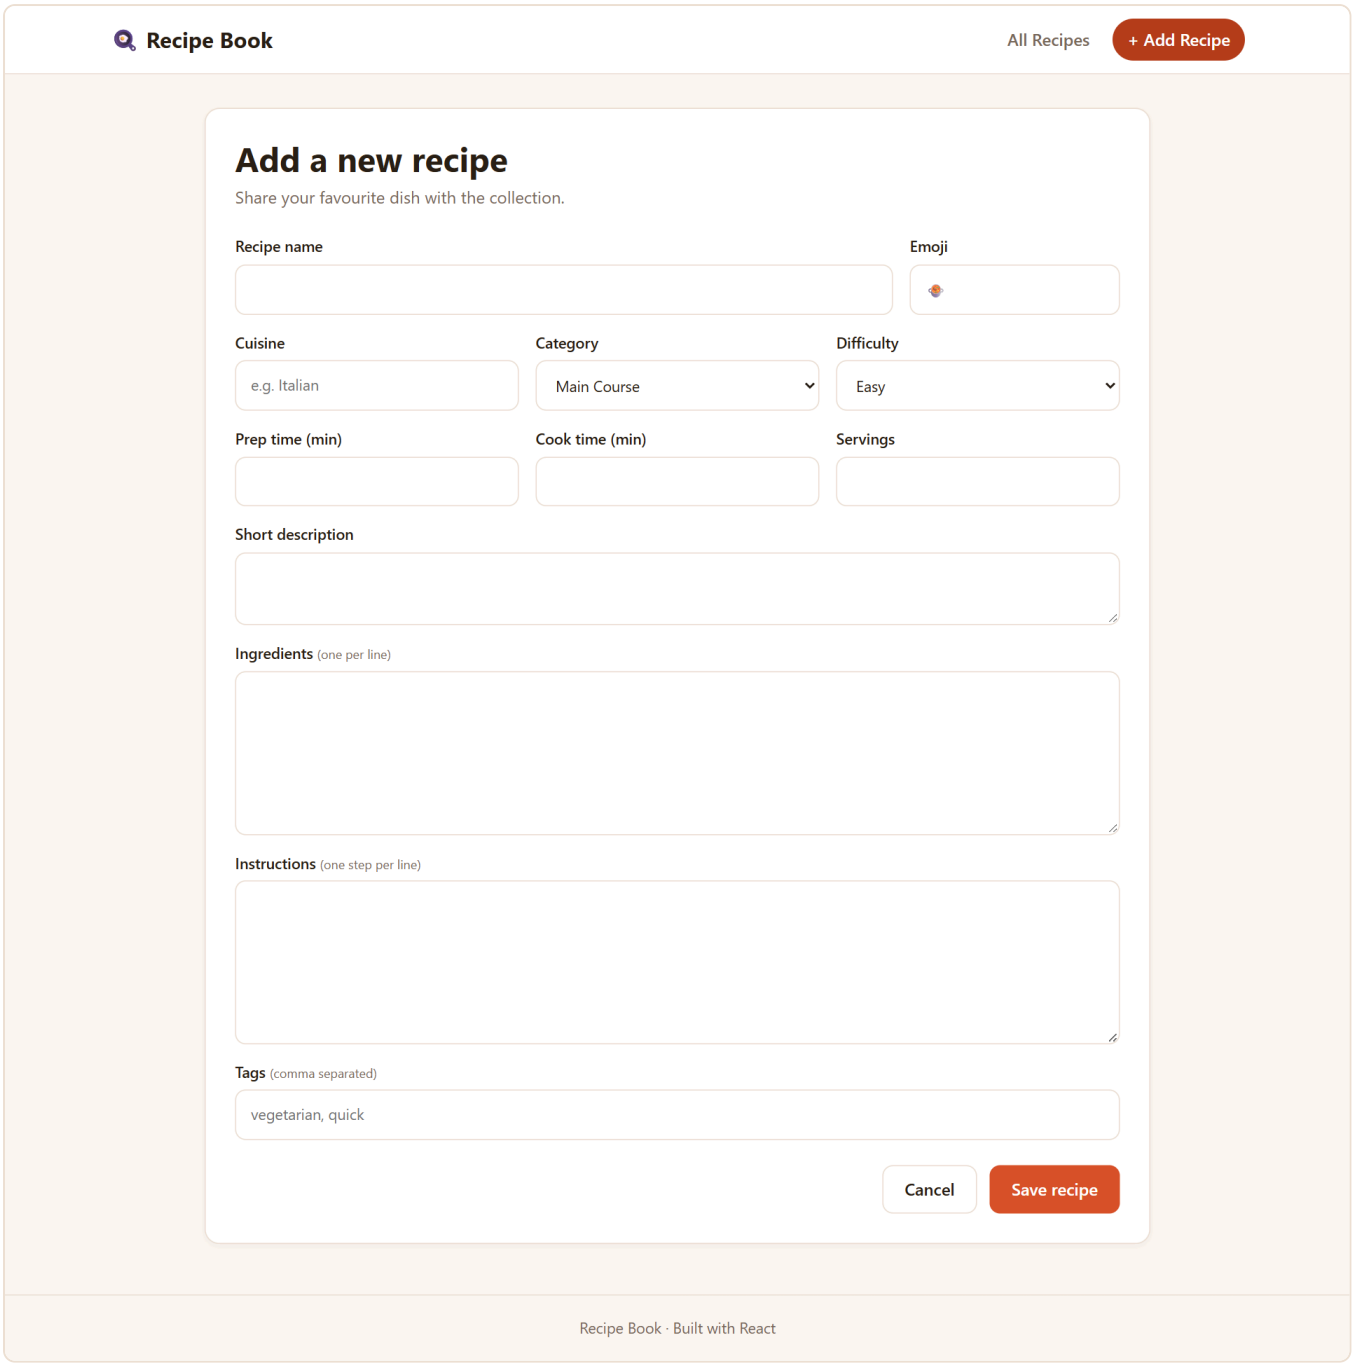

Figure 8 — Add recipe form. Fields for every part of a recipe. Ingredients and instructions take one item per line; tags are comma separated.

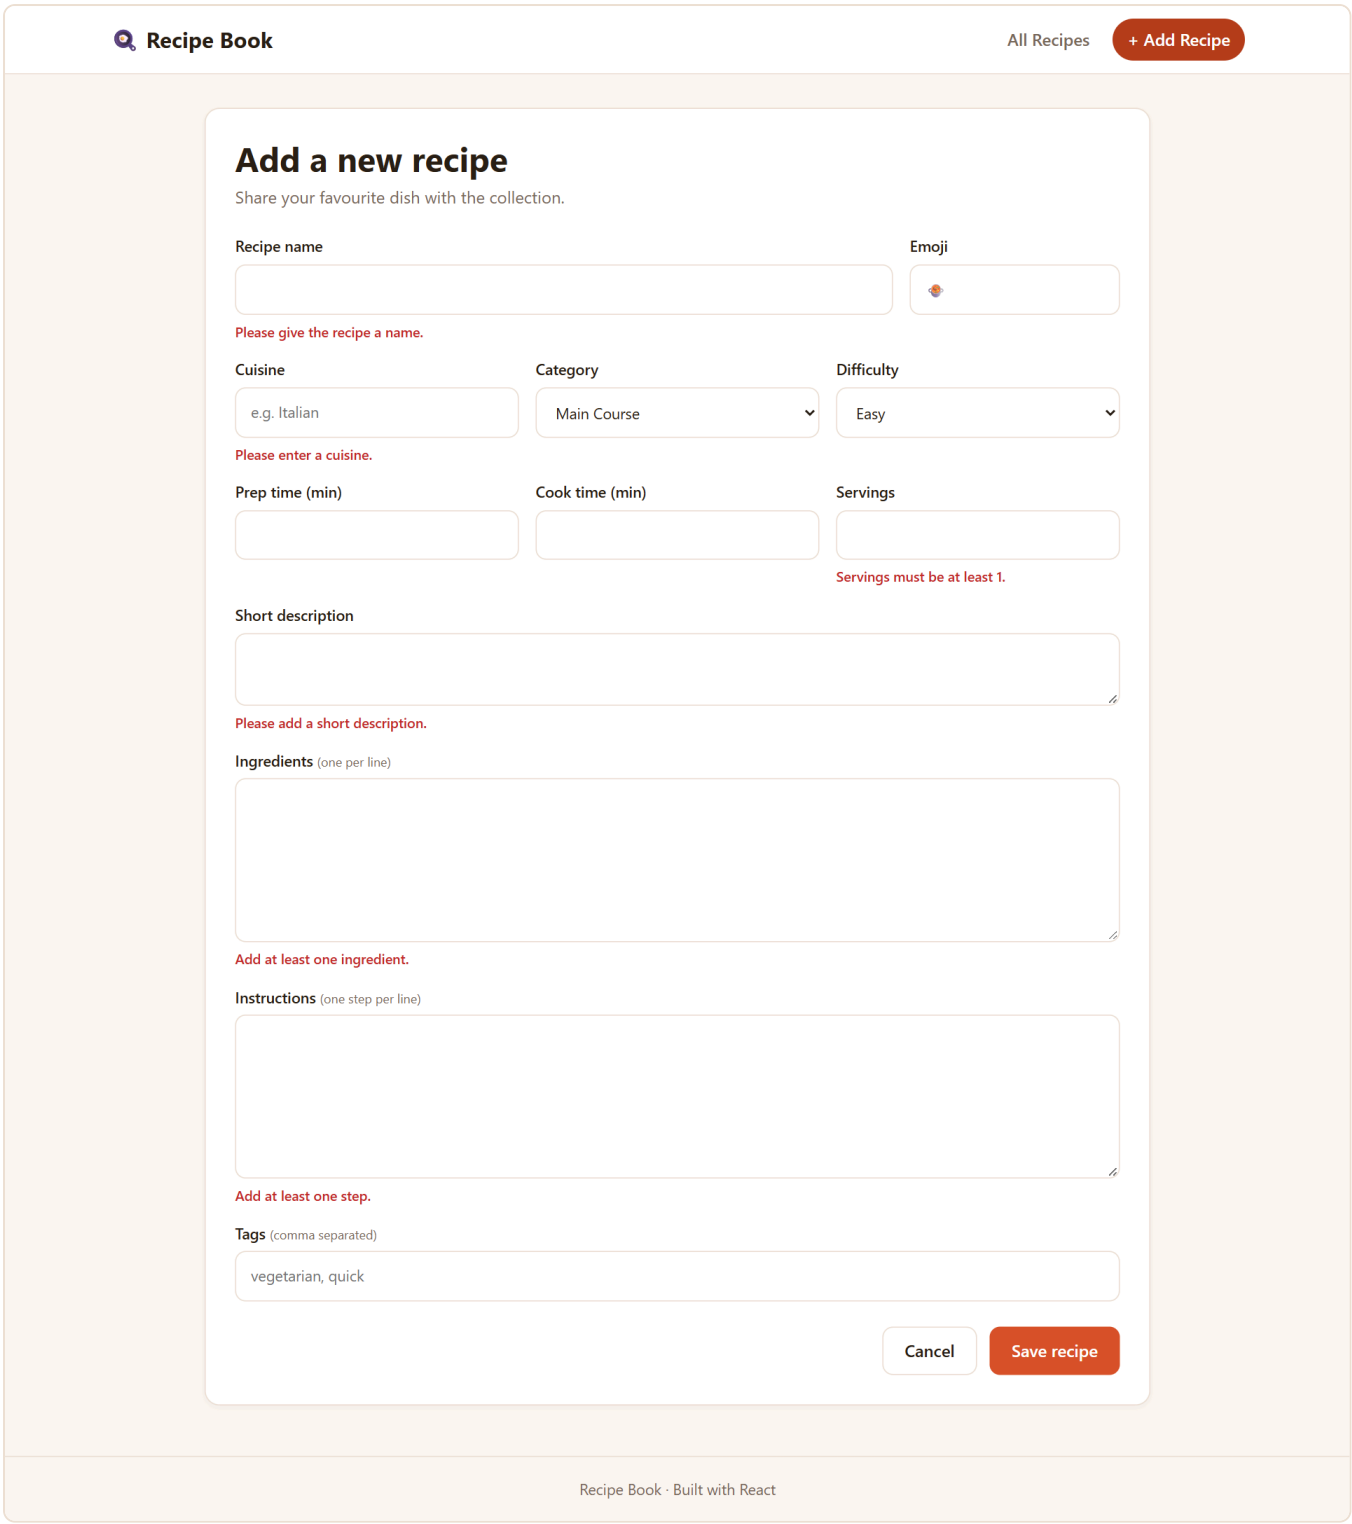

Figure 9 — Validation. Submitting an empty form shows an error under each required field. An error disappears as soon as that field is edited.

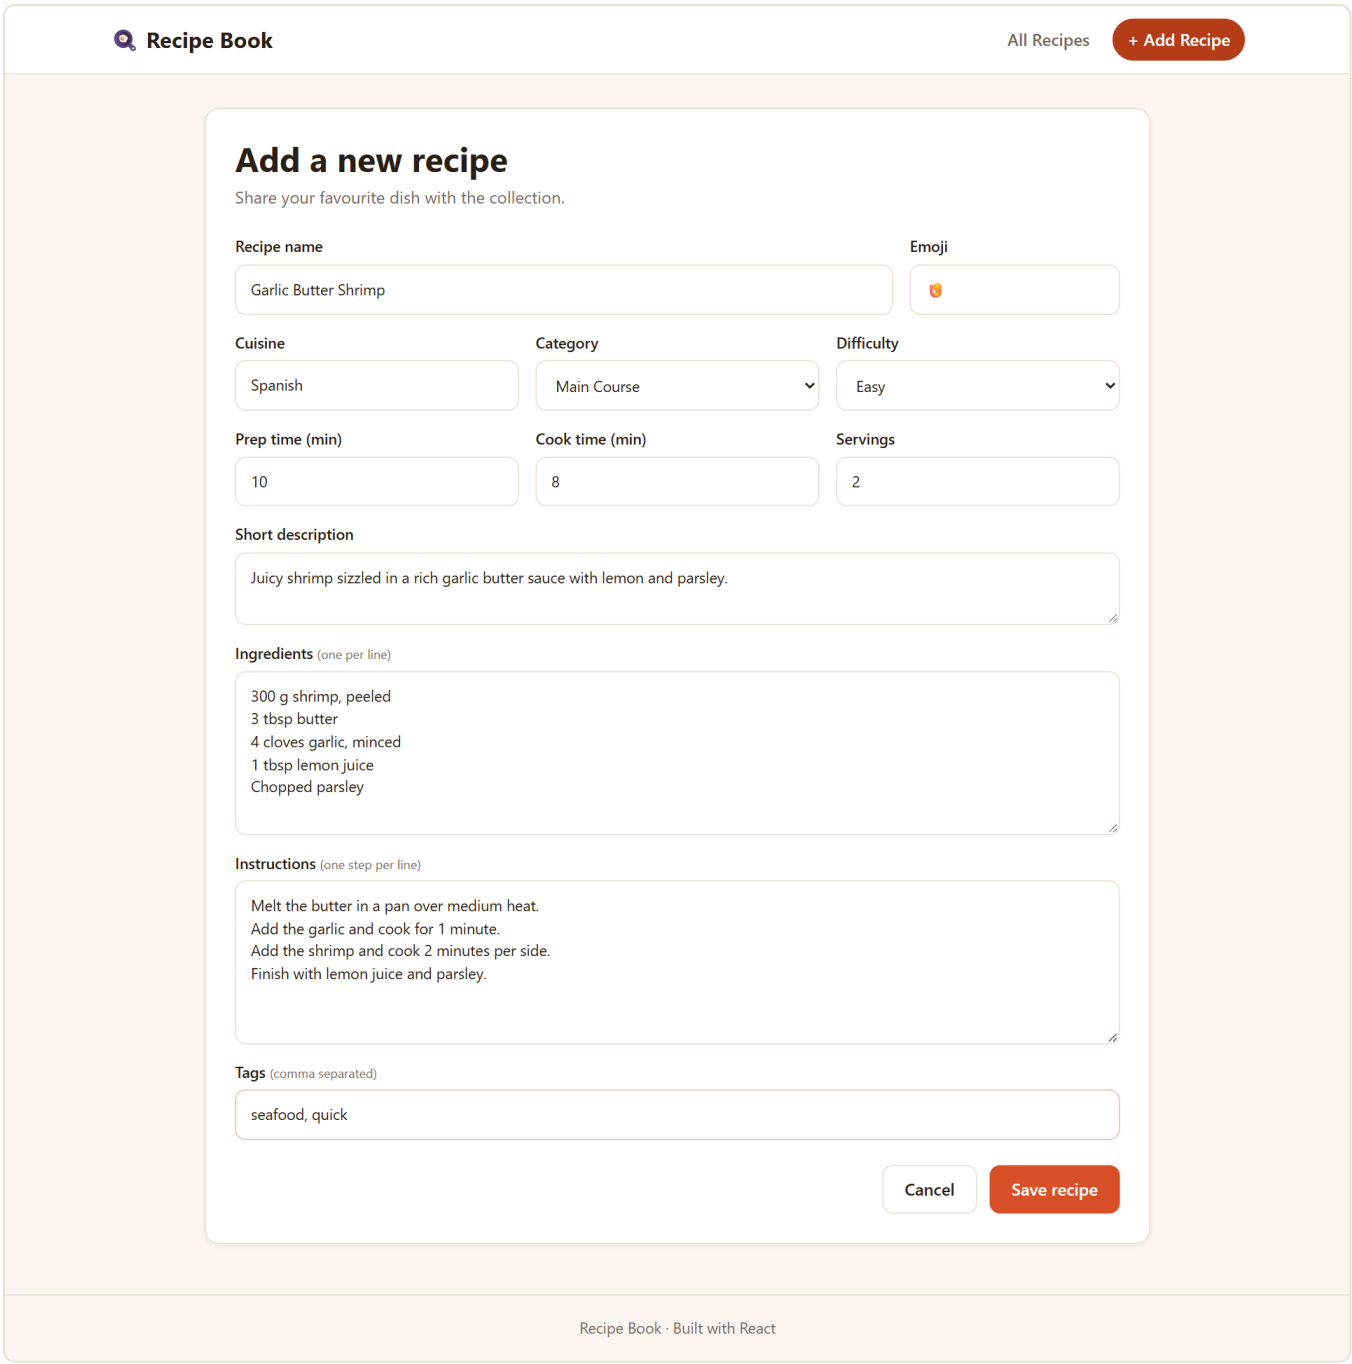

Figure 10 — Completed form. A new "Garlic Butter Shrimp" recipe, ready to save.

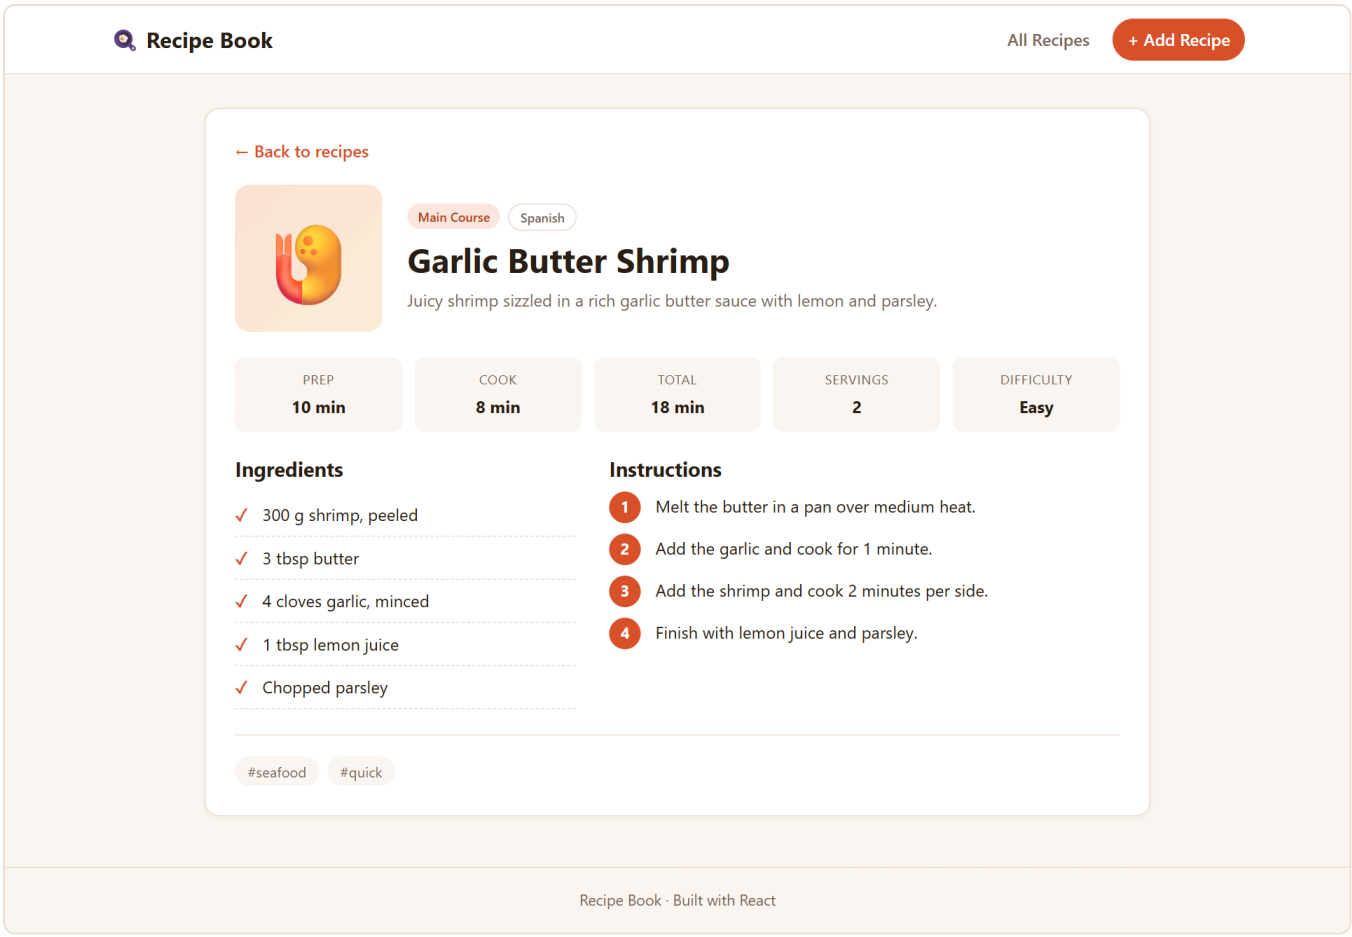

Figure 11 — Saved recipe. After saving, the app opens the new recipe's detail page. Recipes are kept in localStorage, so they survive a page refresh.

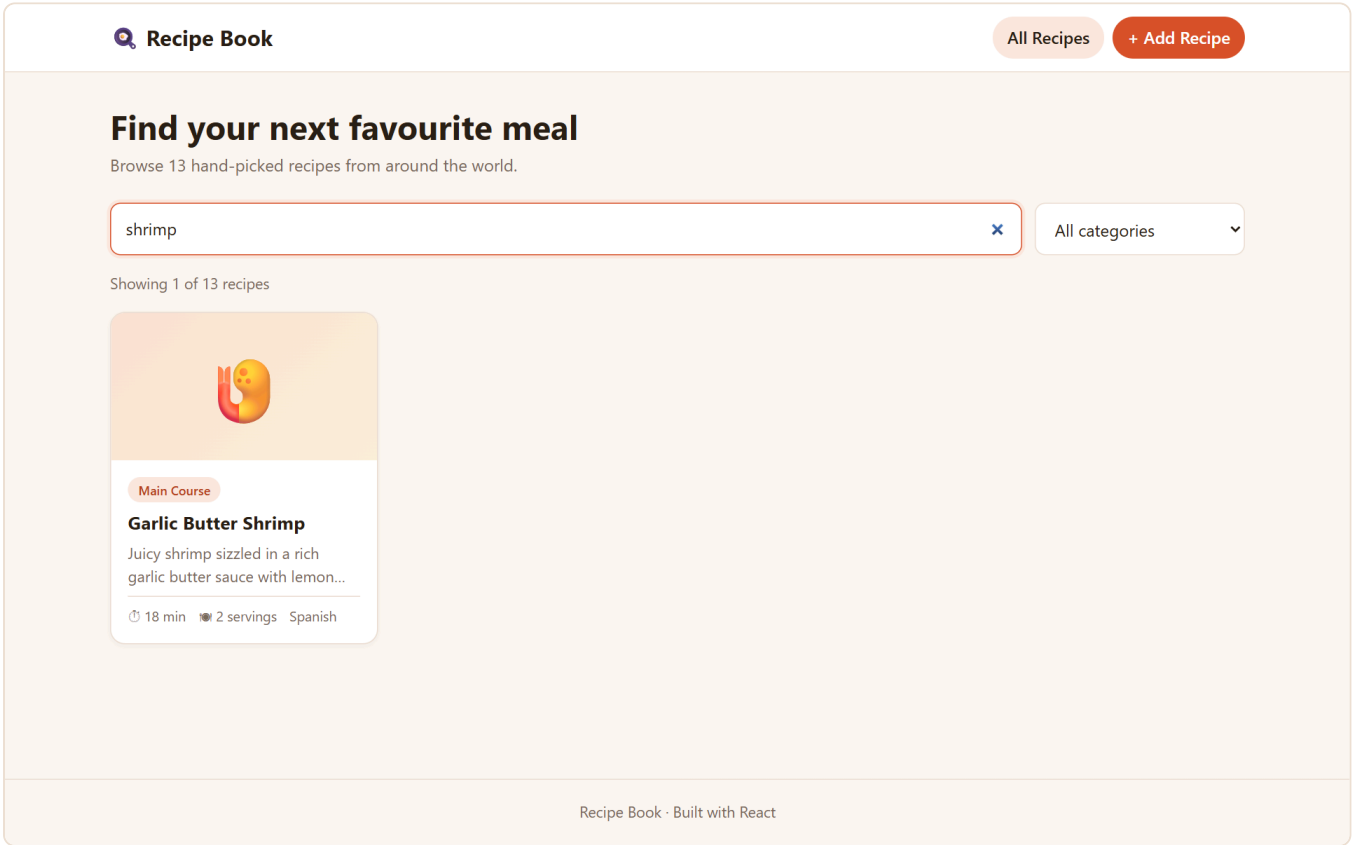

Figure 12 — New recipe is searchable. The added recipe appears in the list and in search results.

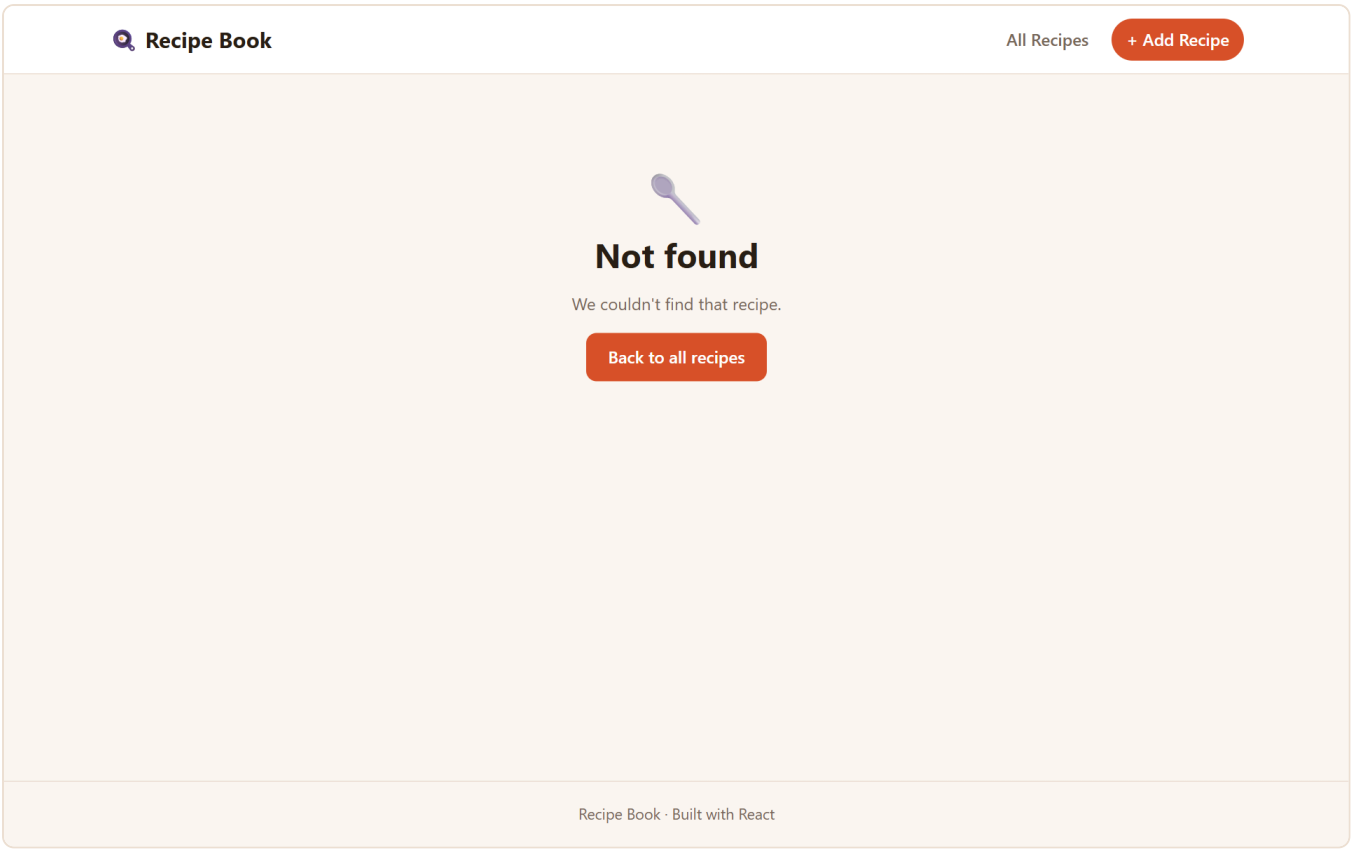

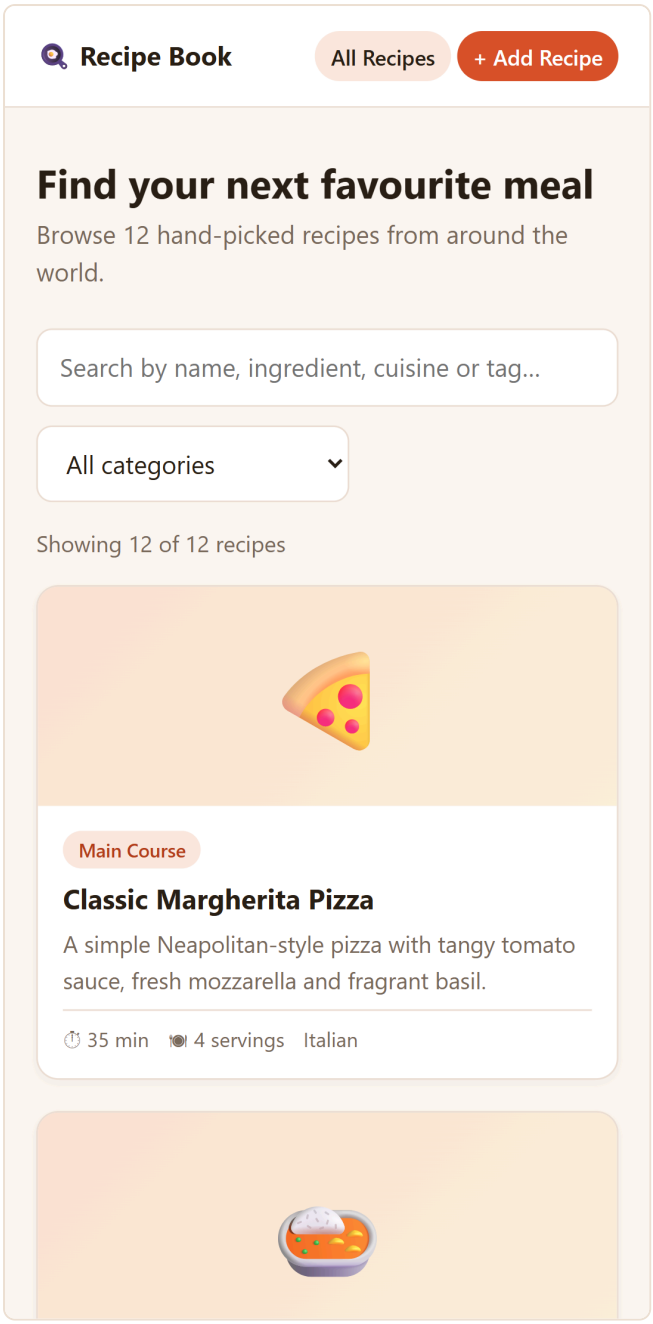

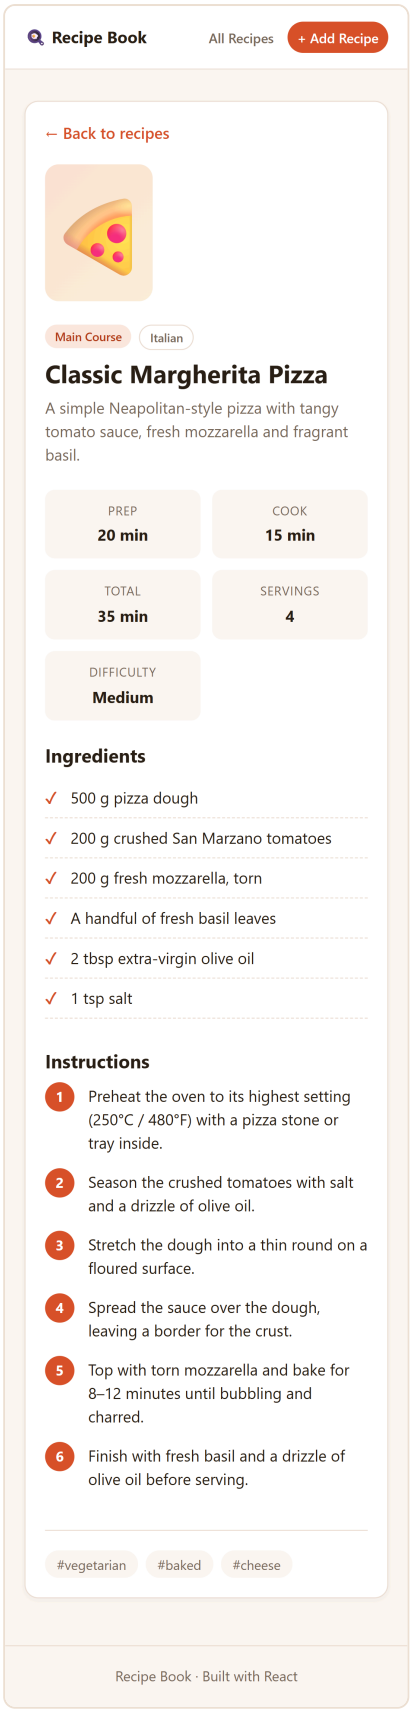

Figure 13 — Not found. Opening a recipe that does not exist shows a clear message with a link back to all recipes.

Responsive layout

Figures 14 and 15 — Mobile (Pixel 7). The list and detail pages adapt to a phone screen: cards stack, the detail columns stack, and the header stays on one line.

End-to-end testing

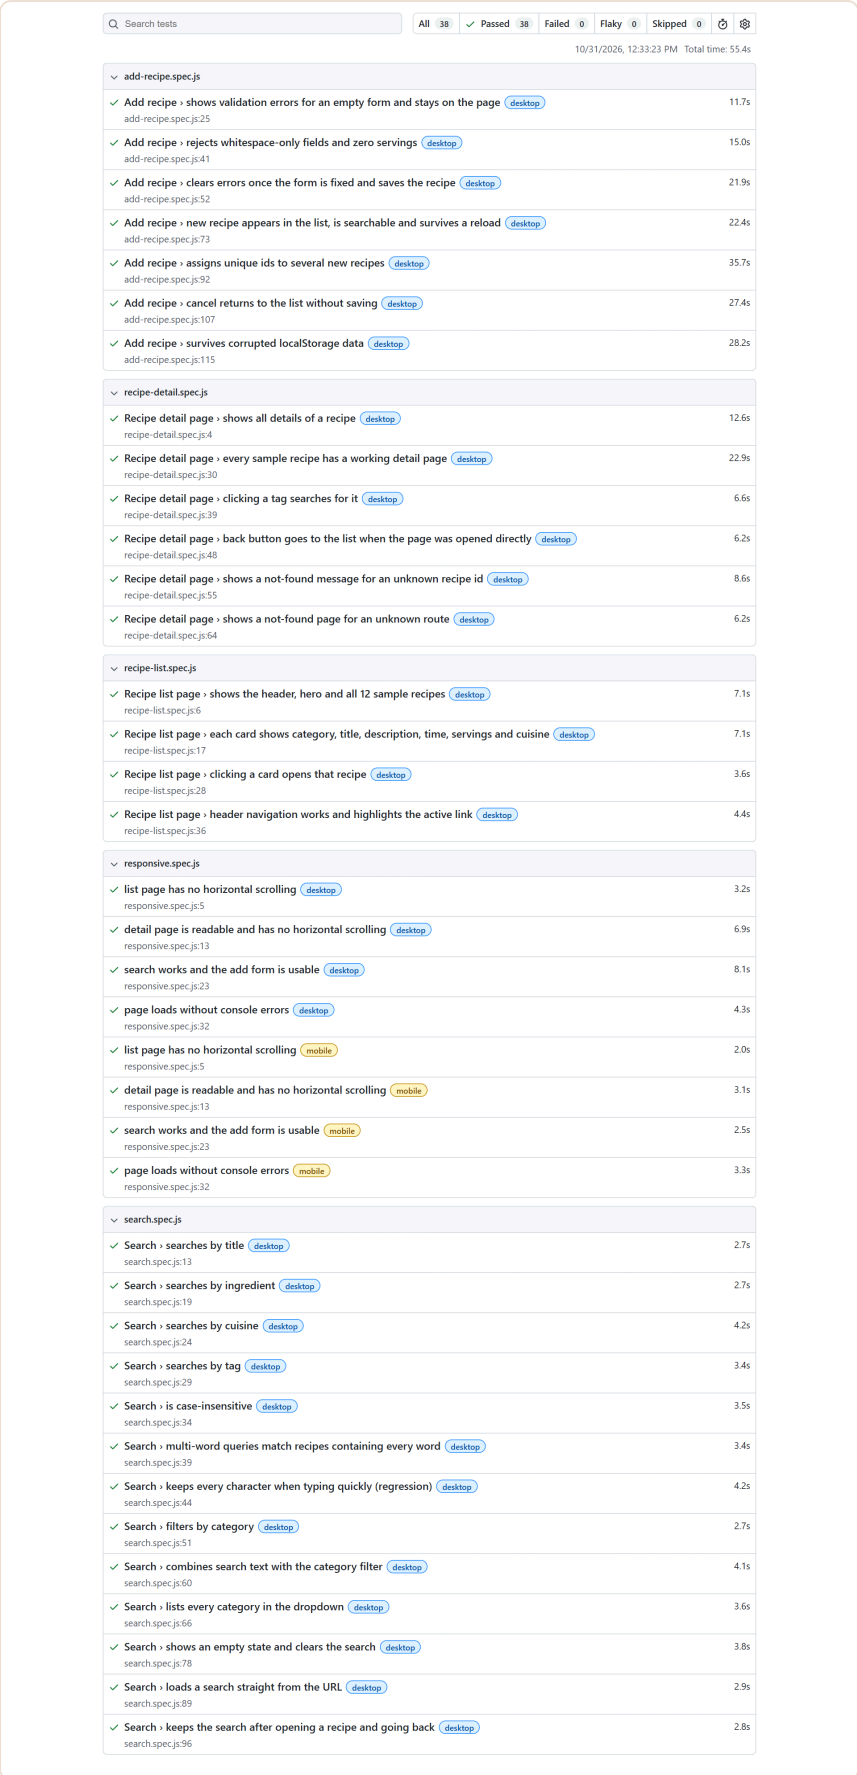

Figure 16 — Playwright test report. All 42 end-to-end tests pass in Google Chrome on desktop and mobile. They cover the list, search, filters, detail page, adding recipes, validation, not-found pages and layout.
